

Quickly organize your single-use fluid path

with alignment, accuracy, and control

The integrity of Single-Use Tubing Systems (SUS) is challenged by breaches of sterility, component failure or operator error. The advantages of changing from fixed stainless-steel systems to SUS can be lost due to flowpath confusion, messy processes, and excessive force on plastic components.

The modular Tubing Management System (TMS) enables process owners to create a simple, repeatable fluid path setup. Process risk is reduced by minimizing potential failure points from assembly leaks, plastic fractures, everyday handling, and operations.

Features

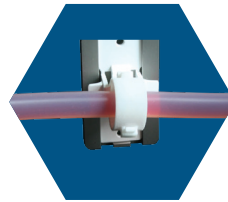

Repligen provides four turnkey product options:

Clip it

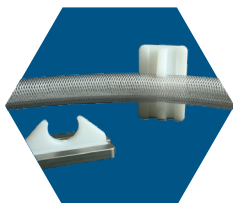

Ensure accuracy and repeatability with a modular mount for a tubing assembly, complete with a unique hygienic clamp design and disposable clip and plate.

Pin it

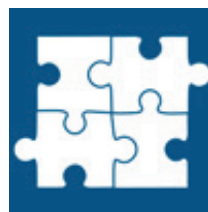

Reduce pressures and loads that compromise a system with targeted support collets that easily clamp into place.

Run it

Using wall surface-mounted tube supports, quickly organize installed processes without redesigning components or revalidation within minutes.

Customize it

Design and fabricate a system specific to your needs with Repligen Solutions. We can assess your SUS at any stage of installation to optimize assemblies and ensure a repeatable, cost-effective solution.
